

“Boilers, Heating Systems and Applied Mathematics” is one of many BOMI International Education classes for building engineers given this year. We want to thank Celeste McDonald with the Harbor Group Management Company for being a gracious host of the program at BB&T tower. We would also like to thank Marty Gilliam for providing his experience and knowledge as a licensed Master Mechanic who brings more than twenty years of experience servicing chillers and air conditioning. Marty is the Service Manager for ThermaServe Inc. for both Jacksonville and Savannah offices.

Class attendees included Michael Hall who is Chief Engineer with the Harbor Group and is currently working on his FMA designation. And Andy Leopard who is Lead Engineer in Technical Services with CB Richard Ellis, who is also working toward his FMA designation.

Marty also included Mike Moshier, one of ThermaServe’s senior mechanics, as an adjunct instructor. “Mike was able to take us thru some of the evolution of our great industry & put the changes over the years in a very unique perspective.” said Marty.

This BOMI course offers credit towards the Facilities Management Administrator (FMA) Designation, which teaches you to manage facilities in a way that best supports staff and fits into the organization’s overall objectives. You will develop valuable skills in strategic planning, project management, corporate finance, capital investment, and physical asset management. Whether you are a new or experienced manager, you will benefit from knowing how to create a quality work environment that maximizes productivity.
